

# REIMAGINING PROFESSIONAL INTERACTIONS: BALANCING ENGAGEMENT, COST, AND SUSTAINABILITY

## Digital Opportunity Problem Analysis

VICTORIA UNIVERSITY OF WELLINGTON

Grace Nguyen, Lisa Zhou, Neenu Prakash, Punam Baniya, Venkat Mandala

### THE HIDDEN COST

### PROBLEM STATEMENT

Professional interactions, dominated by in-person conferences and travel, impose high costs, inequities, and unsustainable carbon impacts. Yet this model endures because digital alternatives fail to replicate the same depth of engagement, trust, and recognition. This “experience gap,” reinforced by cultural inertia and short-term priorities, locks professional communities into unsustainable practices.

### WHY IT MATTERS?

#### Environment

Climate change with far-reaching consequences

#### Social & Accessibility

Disproportionate participation

#### Economic

Cost for travel, accommodation, and time away

### THE PARADOX

### UNDERLYING CAUSES

01 Limitations of Digital Alternatives

02 Cultural Inertia and Professional Norms

03 Economic Interests of the MICE Industry

04 Short-Term Benefits Over Long-Term Sustainability

### AS-IS BUSINESS MODEL

| Key Partner                                                                                      | Key Activities                                          | Customer Relationship                                                                    | Customer Segments                                                                      |
|--------------------------------------------------------------------------------------------------|---------------------------------------------------------|------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| Venues, Caterers, Airlines, Hotels, Sponsors, Keynote Speakers, IT Suppliers.                    | Content curation, logistics, event planning, marketing. | Formal sessions + informal networking; transactional for employers; negative for planet. | Associations<br>End-Users (Employees, Academics, Practitioners)<br>Employers<br>Planet |
| Key Resources                                                                                    |                                                         | Channels                                                                                 |                                                                                        |
| Staff, reputation, venues, financial capital, networks.                                          |                                                         | In-person venues, travel systems, professional networks, online marketing.               |                                                                                        |
| Cost Structure                                                                                   |                                                         | Revenue Stream                                                                           |                                                                                        |
| High fixed/event costs, travel, staff time, opportunity costs, externalized environmental costs. |                                                         | Registration, sponsorship, exhibitor fees, publications.                                 |                                                                                        |

### VALUE PROPOSITION CANVAS

The current model delivers values, but at the cost of high travel expenses, inequitable access, and an unsustainable carbon footprint, exposing a critical experience and sustainability gap.

### SCOPE FOR INNOVATION

HMW drive true transformation that creates economic, social, and environmental value?

HMW build credible engagement that preserves trust, recognition, and networking?

HMW use behavioral science and ethical design to foster meaningful participation?

HMW create sustainable economic models for associations and the MICE industry?
